Aristotle

Law of Non-Contradiction:

- No statement can be both true AND false

Law of Excluded Middle:

- Every statement either true OR false

Liar Paradox:

- “This statement is not true.”

Other ways of knowing:

- Poetic license!
- Religious knowledge!
- Quantum mechanics!

... so, we are only assuming 1 kind of logic

Boole, *Laws of Thought*, 1854

Shannon, 1938

PROPOSITION I.

All the operations of Language, as an instrument of reasoning, may be conducted by a system of signs composed of the following elements, viz. :

1st. *Literal symbols, as x , y , &c., representing things as subjects of our conceptions.*

2nd. *Signs of operation, as $+$, $-$, \times , standing for those operations of the mind by which the conceptions of things are combined or resolved so as to form new conceptions involving the same elements.*

3rd. *The sign of identity, $=$.*

And these symbols of Logic are in their use subject to definite laws, partly agreeing with and partly differing from the laws of the corresponding symbols in the science of Algebra.
